

Getting yourself organized with Orgmode

E05S02 – Function: Linking (external)

Goal: Link to other items somewhere in the world

Recipe: A link looks like that: `[[target]]` You can also use a drescription like that `[[target][description]]`

Targets: `protocol:location`

Special: Linking to items with an ID property
ID is an UUID that you can create with
  `org-id-get-create`

Shortcut: Copy the code from the video description to the end of your `~/.emacs` file

Customizing: `org-id-locations-file` stores in what file OrgMode should look for IDs
