

# Getting yourself organized with Orgmode

## E05S03 – Function: Attachments

**Goal:** Attach some files to your tasks

**Recipe:** Call the attachment system with    

 Set a specific directory for the tasks attachment

 Inherit the attachment directory to the children of the task

The attachments are usually stored under `./data/` and then a structure based on the ID property

 Attach file with the method configured in `org-attach-method`

 Attach file with by copying

 Attach file by moving (deletes original file)

 Attach file by creating a hard link (not on all file systems)

 Attach file by creating a symbolic link (not on all file systems)

 Open attachment, if more than one ask for the name

  Open attachment in Emacs

 Open the tasks attachment directory

  Open the tasks attachment directory but force using dired in Emacs

 Select and delete a single attachment

  Delete all attachments

 Create a new attachment as an emacs buffer

 Synchronzie the task with its attachment directory
